

EngagerConnect empowers your patients with the knowledge to take meaningful action on their Kidney Health decisions.

Each curriculum is made up of 6 interactive learning modules. Patients are mailed a kit that includes supplementary learning aids and 5G video chat devices if needed.

EngagerConnect can connect to your existing EHR and run a predictive risk score model that identifies patients at an elevated risk of progressing to CKD 4 or ESRD.

Service offerings can be chosen on an “a la carte” basis so you only pay for what you need. Services include on-demand educators, session scheduling, patient connectivity, and audit support & archiving.
